4 Gradualization

4.1 Syntax

$$\widetilde{\phi} \quad ::= \quad \phi \mid \phi * ?$$

Note: allowing ? at different position is hardly useful

- dynamically: order makes no difference
- statically: Imagine substituting ? with $acc(x.f) * [...]$. The only time this makes sense to **not** put to the very right is when there are expressions containing $x.f$ (in the non-gradual part). In other words, there are expressions that are framed only when ? is substituted in a specific way. But then why not require the necessary framing in the non-gradual part as well, i.e. why not simply **write out** $acc(x.f)$ instead of relying on ?? Corollary: The non-gradual part of $\widetilde{\phi}$ should be self-framed.

; useless difference in static semantics).

4.2 Concretization A

$$\begin{aligned}
&\gamma(\phi) && = \{\ \phi' \mid \phi' \iff \phi\ \} \\
&\gamma(\phi * ?) && = \{\ \phi' \mid \exists \phi_x : \phi * \phi_x \iff \phi'\ \} \\
& && = \{\ \phi' \mid \phi' \implies \phi\ \}
\end{aligned}$$

4.3 Abstraction (to show: set of ϕs is lattice)

$$\alpha(\overline{\phi}) = (\sqcap \overline{\phi}) * ?$$

4.4 Concretization B (as in better)

$$\begin{aligned}
&\gamma(\phi) && = \{\ \phi\ \} \\
&\gamma(\phi * ?) && = \{\ \phi * \phi_x \mid \phi_x\ \}
\end{aligned}$$

4.5 Abstraction (to show: set of ϕs is lattice)

$$\begin{aligned} \alpha(\{\ \phi\ \}) &= \phi \\ \alpha(\overline{\phi}) &= (\sqcap\overline{\phi}) * ? \end{aligned}$$

4.6 Theorems

4.6.1 Soundness of α

$$\forall\overline{\phi} : \overline{\phi} \subseteq \gamma(\alpha(\overline{\phi}))$$

4.6.2 Optimality of α

$$\forall\overline{\phi}, \widetilde{\phi} : \overline{\phi} \subseteq \gamma(\widetilde{\phi}) \implies \gamma(\alpha(\overline{\phi})) \subseteq \gamma(\widetilde{\phi})$$

5 Theorems

5.1 Invariant $invariant(H, \rho, A_d, \phi)$

5.1.1 Heap consistent

$$\begin{aligned} \forall x, o, C : \rho(x) = o_C \implies \\ \exists f_C, m : \texttt{fields}(C) = f_C \\ \wedge\ H(o_C) = (C, m) \\ \wedge\ (\forall (T, f) \in f_C : H, \rho \vdash m(f) : T) \end{aligned}$$

5.1.2 Phi self-framed

$$\vdash_{\texttt{sfrm}} \phi$$

5.1.3 Phi holds

$$H, \rho, A_d \vDash \phi$$

5.1.4 Types preserved

$$\begin{aligned} &\forall e, T : \phi \vdash e : T \\ \implies\ &H, \rho \vdash e : T \end{aligned}$$

5.2 Soundness

5.2.1 Progress

$$\begin{aligned} \forall\ \ldots : \quad &\vdash \{\phi_1\} s' \{\phi_2\} \\ \implies\ &invariant(H_1, \rho_1, A_1, \phi_1) \\ \implies\ &\exists H_2, \rho_2, A_2 : (H_1, (\rho_1, A_1, s'; \overline{s}) \cdot S) \rightarrow^* (H_2, (\rho_2, A_2, \overline{s}) \cdot S) \end{aligned}$$

5.2.2 Preservation

$$
\begin{aligned}
\forall \ldots : \quad & \vdash \{\phi_1\} s' \{\phi_2\} \\
& \implies invariant(H_1, \rho_1, A_1, \phi_1) \\
& \implies (H_1, (\rho_1, A_1, s'; \overline{s}) \cdot S) \rightarrow^* (H_2, (\rho_2, A_2, \overline{s}) \cdot S) \\
& \implies invariant(H_2, \rho_2, A_2, \phi_2)
\end{aligned}
$$
